Methodology

- The DIHK results are based on surveys of companies conducted by a total of 79 chambers of commerce and industry (IHKs). At the beginning of 2026, the IHKs had evaluated around **26,000 responses**. The regional evaluations of the IHKs are available on the [DIHK website](#).
- By economic sector, the responses are distributed across the Manufacturing Industry (25 per cent), construction (six per cent), trade (22 per cent) and services (47 per cent). The classification of industries and economic sectors in the DIHK Economic survey is based on the classification of economic sectors used by the Federal Statistical Office (WZ). The WZ 2008 classification will be used until the survey in early summer 2025. From Fall 2025, the classification will be based on the WZ 2025.
- The responses are broken down by company size as follows: 40 per cent of companies with up to nine employees, 14 per cent of companies with ten to 19 employees, 36 per cent of companies with 20 to 199 employees, six per cent of companies with 200 to 499 employees, two per cent of companies with 500 to 999 employees, and two per cent of companies with more than 1,000 employees.
- The Chambers of Industry and Commerce design their sample in such a way that it provides a representative picture of the mood in the local commercial economy (stratified sample based on industry, region and company size). Aggregation at federal level is carried out using regional and industry-specific weighting. The responses to the regular economic questions (see questionnaire) from establishments with more than 500 employees are weighted by a factor of 2, and the responses from establishments with more than 1,000 employees are weighted by a factor of 3. No weighting by size class is applied to business risks. For additional questions, size class weighting is omitted if the unweighted share of companies is more meaningful.
- When asked about business risks, companies can write a free text response for the answer option "Economic policy". In the current survey, there were around 6,800 free text responses. These were categorised as precisely as possible based on the terms mentioned and the topics covered. The most frequent responses are presented as a word cloud. The larger a term is, the higher the number of free text responses on that topic.
- The survey took place **from 15 December to 23 January 2026**.
